

**AMENDMENTS TO THE SPECIFICATION:**

On Page 4, please revise the paragraph beginning on line 13 as follows:

In step 104, a current satellite almanac is obtained for a satellite constellation, for example, from a server in the communications infrastructure associated with a wireless device. For example, in an *iDEN* infrastructure, the server may be a Mobile Location Center, and the wireless device may be a pocket-sized digital *iDEN* handset for performing a variety of functions coordinated through the Mobile Location Center, including a GPS receiver. The Mobile Location Center can obtain the current satellite almanac, for example, directly from a GPS receiver, ~~a GPS receiver~~ that may be connected to the Internet, or from Internet resources, ~~for example, such as the United States Coast Guard Navigation Center's website~~ <http://www.naveen.uscg.gov/ftp/GPS/almanacs>.

On Page 5, please revise the paragraph beginning on line 15 as follows:

In step 206, the current satellite almanac is obtained by a server in the communications infrastructure associated with the wireless device. For example, in an *iDEN* infrastructure, the current satellite almanac may be obtained by a Mobile Location Center. However, other servers and other communications infrastructures may be used to practice the present invention in various embodiments within the scope of the appended claims. The Mobile Location Center can obtain the current satellite almanac, for example, directly from a GPS receiver or from web-based resources such as the United States Coast Guard Navigation Center's website <http://www.naveen.uscg.gov/ftp/GPS/almanacs>.
